

Nowadays, IT is very important for our lives. It allows us to do everything in an easier way. The technology has evolved a lot since I was a child, and we have to adapt to it.

On the one hand, IT has a big impact on everything. It is very useful for our jobs, hobbies and lives. We can do a lot of things from home. For example, we can buy some clothes, food, kitchen items, ... Only with one click. It is awesome and simply fantastic! Moreover, it allows us to improve our knowledge about a lot of areas of life.

On the second hand, I believe that technology will evolve even more, but I don't imagine what is the next level. Technology has no limits, and impossible things will be able to be done today.

In conclusion, IT world is very relevant for us, and we are lucky to have it.
